

## CNC Laser Cutting Services

As part of being able to offer the complete service parts can be laser cut. Production engineers decide which cutting method is best suited. Laser is ideal for prototypes, complex shapes and thick material up to 10mm. The machine can cut mild steel, stainless steel and aluminium up to 12mm thick.

The quality of the finished product is extremely high without the cost and time associated with conventional tooling setup.

**Max worksheet size:** 2540mm x 1270mm

**Accuracy:** +/-0.01mm
